Tension Stiffening in GFRP RC Beams

## BACKGROUND

### ➤ Serviceability-controlled design

#### ❖ ACI 440.1R-03

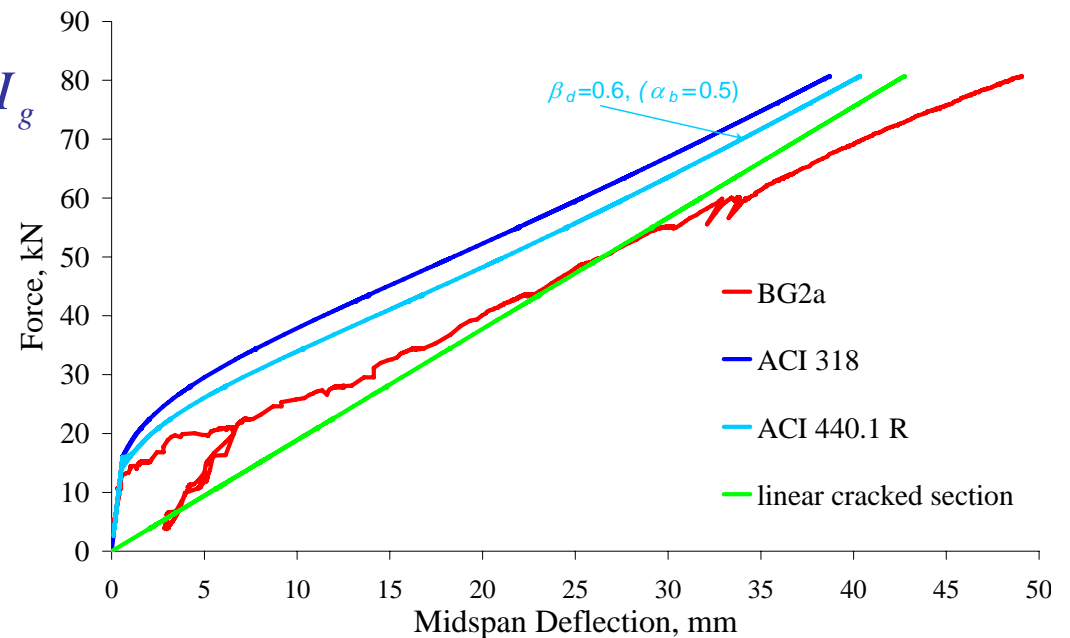

$$I_e = I_{cr} + \left( \beta_d I_g - I_{cr} \right) \left[ \frac{M_{cr}}{M_a} \right]^3 \leq I_g$$

$$\beta_d = \alpha_b \left[ \frac{E_f}{E_s} + 1 \right]$$

$\alpha_b = \text{bond coefficient} = 0.5$

#### ❖ IStructE (1999)

- Steel RC equations applicable

The University  
Of  
Sheffield.

ECF16 - Shah Symposium (MMMCP)

July 3-7, 2006 – Alexandroupolis, Greece

## Tension Stiffening in GFRP RC Beams

# BACKGROUND

### ➤ Key Variables

- Reinforcement Ratio
- Modulus of Elasticity
- Bond Characteristics

### ➤ Other Variables

- Concrete cover
- Concrete Strength
- Rebar diameter

The University Of Sheffield.

## Tension Stiffening in GFRP RC Beams

# METHODOLOGY

### ➤ Experimental:

- *Structural tests:*  
(Beams and Slabs,  
CFRP and GFRP)
- *Material tests*  
(Concrete and rebars)

### ➤ Analytical:

- *Sectional analysis*
- *Finite element analysis*

The University  
Of  
Sheffield.

**Tension Stiffening in GFRP RC Beams**

## CONCLUSIONS

### Behaviour of GFRP RC beams:

- *Deflection of GFRP RC is mainly caused by flexural curvatures.*
- *Shear-induced deflections may not be negligible for low reinforcement ratios and deep-penetrating wide cracks.*
- *The response of the compressive concrete zone requires further consideration due to the increased localised effect of cracks.*
- *GFRP RC show good bond.*
- *CSA predicts the maximum rebar strain at a crack, underestimates the extreme-fibre concrete strain, and when shear induced deformations are sizeable may not provide an upper-bound deflection.*

The  
University  
Of  
Sheffield.

**Tension Stiffening in GFRP RC Beams**

## **CONCLUSIONS**

### **Tension Stiffening of GFRP RC beams:**

- *Contrary to steel RC, the amount of GFRP reinforcement may have negligible effect on tension stiffening in the stabilised cracking phase*  
*( $\rho > 0.4\%$ , or  $\rho_{eff} > 1.25\%$ )*
- *An average  $E_{eff}$  ( $1.10 E$ ) offers a reasonable approximation for the whole stabilised cracking phase.*
- *Tension stiffening in GFRP is lower than steel RC, which is due to the high levels of rebar strain involved.*
- *An initial tension stiffening relationship is proposed but needs to be expressed more fundamentally.*

The  
University  
Of  
Sheffield.
